Originally designed to address the needs of a busy fire station, these versatile lockers work equally well where easy access and storage of bulky equipment is a priority.

All-steel construction is rugged enough to store heavy wet coats, boots and equipment day after day. Open mesh walls are ideal to help damp items to dry. See-through mesh also allows you to see what sort of items are being stored on your premises. These spacious lockers are built strong and rugged, yet are still moveable as your needs change.

Our design features 2" steel tubes with our standard 2" x 2" mesh. Can also be fabricated with expanded metal for greater security.

Tough Steel Locker Systems handle heavy equipment and bulky clothing.

Each locker is made up of three 18-inch wide compartments; overall dimension is 54" x 18" x 84". Locker units easily bolt together to form a complete, sturdy locker system.
